

EB-Connect WiFi

WiFi module

Usage

WiFi control of Ebeco's 500 series
Enables control via app and open API

- ✔ Extended calendar function
- ✔ Energy and cost monitoring
- ✔ Google Home Assistant Support

EB-Connect WiFi plays an important role in our WiFi READY concept. With the help of the WiFi module, which is inserted into the thermostat, EB-Therm 500 can be developed from an underfloor heating thermostat to a system that can be controlled via the Ebeco Connect app or the open API. In the app, energy use is presented in a clear way while the calendar and alarms functions are made available via push notifications or emails. All functions of the thermostat can be accessed from the app.

Specifications

Frequency band	2,4 GHz
Max output	20 dBm
Dimensions	4*2 cm
Protocol	IEEE 802.11b/g/n

Documents

Manual
